To the Legislative Assembly of Alberta, in Legislature Assembled:

Petition summary and background	Irlen Syndrome is a visual processing disorder that effects 15% of the general population. Its impact is felt in every area of life including reading, writing, concentration, memory, extreme light sensitivity, visual perception, depth perception, mental health (linked to anxiety, depression, attention deficits, phobias of people and open spaces), and physical health (causes migraines, nausea, fatigue). The use of Irlen Spectral Filters has been clinically and scientifically proven to mitigate and alleviate the symptoms of Irlen Syndrome. Irlen Syndrome is a dysfunction of the visual pathway in the brain. It is NOT a vision (eye-based) issue.
Action petitioned for	We, the undersigned, are concerned citizens who urge the Government of Alberta to acknowledge Irlen Syndrome as a disability and list it under conditions covered by Alberta Health Services.
